

Cylindrical Tic Tac Toe

How to Play:

Cylindrical Tic Tac Toe is a new twist on the classic pen and paper game. The object of the game is to connect four moves in a row in one of a variety of way. (see "How to Win")

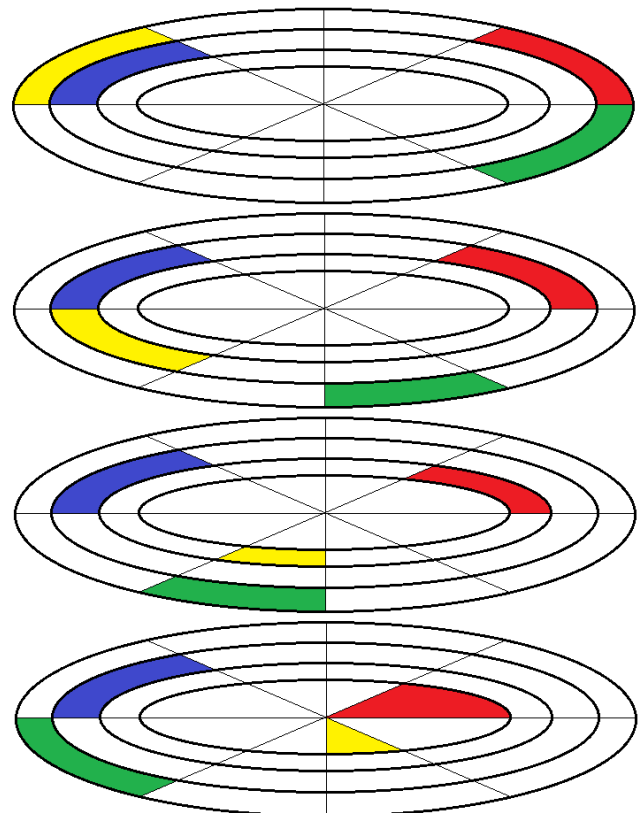

Starting a Game

When the application begins, press the "Start" button to view the main menu. To begin a game, press the "New Game" button. This will bring up the new game options menu, shown to the right, which allows players to select whether they wish to play against an AI, or another human opponent. After choosing the desired opponent for the new game, press the "Start" button to begin.

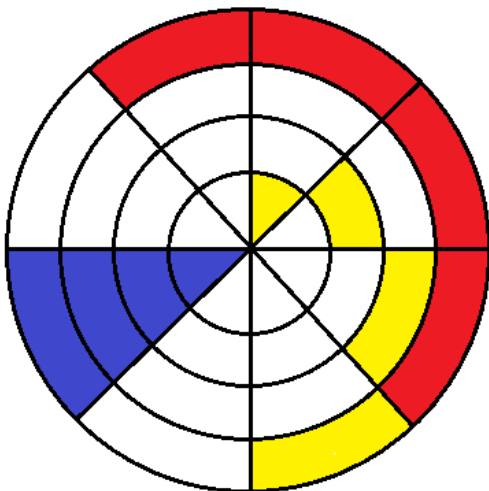

Game Controls

To make a move, simply tap the desired space on one of the four game layers to selected it, and tap the same space again to confirm the move. Some spaces are not always revealed in the game view, so in order to move on one of these spaces, a player must rotate the layers. To rotate the layers clockwise, swipe the screen from left to right, and to rotate the layers counter-clockwise, swipe the screen from right to left.

How to Win

The goal of the game is to get four of your moves in a row before your opponent does. This can be done within one of the four game layers, in one of three ways (shown below). A win can also be achieved by getting four moves in a row across the four layers, in one of four ways (shown to the right)

Ways a player can win within a game plane
(4-in-a-row around a ring, in one "slice", or in a spiral)

Ways a player can win across the four game planes
(4-in-a-row vertically in the same space on each plane, one space in each plane completing a "slice", one adjacent space in each place in the same ring, or with a 3D spiral)
